

Classic

The sectional roller insulated door Thermicroll® Classic is suitable for any type of industrial vain which requires an easy, fast and compact closing.

The product is characterized by the presence of oversized mechanical parts that contribute to the durability of the door and ensure that it is not necessary extraordinary maintenance interventions.

A robust tube with direct transmission wraps the insulated mantle; that requires no balance spring system, so decreases the routine maintenance and related costs.

The section of the curved profile allows an upper winding with reduced size and a silent movement of the mantle.

It is possible to insert windows in transparent polycarbonate able to give plenty of light to your interior spaces.

The creations of the insulated doors Thermicroll® are certified as exclusive and original products, unique for strength, practicality, functionality and quality.
